

Browser Requirements for GeisingerConnect and EMRLink

What Browsers are compatible with GeisingerConnect and EMRLink?

GeisingerConnect and EMRLink can be accessed using Internet Explorer 8, 9, or 10, Firefox 10 or later, or Chrome on the Windows operating system. Users of the Macintosh operating system can use Firefox 10 or later, Chrome, or Safari to access the applications.

EMRLink can also be accessed by Apple iPads running iOS 6 or 7 using the Safari browser and in January, 2015, Android tablets using the Chrome browser. The native Android browser and other third-party browsers are not supported. The Chrome browser on iOS is also not supported.

(Coming January, 2015)

To function properly with your web application, a browser must be able to accept cookies, and it must be able to run JavaScript. These capabilities are enabled by default when you install the supported browsers, so they are supported unless you have explicitly disabled them.

To show scanned images using Acordex ViewTIFF, your browser needs to have Java enabled as well. Please note that tablets do not support JavaScript.

In Mac OS X, you must enable full keyboard access in order to tab between fields in the Web application. To do this, access System Preferences > Keyboard & Mouse > Keyboard Navigation > Full keyboard access, and select the All Controls option.
